PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 2+ years of software development experience, specializing in Kotlin, Java, Spring Boot, and microservices. Hands-on experience modernizing legacy services, developing REST APIs, implementing Redis-based session management and JWT authentication, and integrating AWS serverless components. Experienced in performance profiling, API optimization, CI/CD workflows, and building automation solutions. Strong foundation in Data Structures and Algorithms, Object-Oriented Programming, and backend engineering principles.

PROFESSIONAL EXPERIENCE

Accenture | Bengaluru, India — Sept 2024 - Present

SOFTWARE ENGINEER ANALYST

- **Modernizing legacy middleware:** Migrating Ruby on Rails and Python services to Kotlin and Spring Boot WebFlux microservices, contributing to the migration of **12+ REST APIs** and development of **15+ APIs** to improve service performance and maintainability.
- **Backend API development:** Implementing RESTful services using Kotlin, Spring Boot, layered architecture, and WebClient for backend and external service integrations; validating functional parity with legacy endpoints across multiple scenarios.
- **Authentication & security:** Implementing and maintaining WebFlux filters for authentication, request logging, and execution handling; working on JWT-based authentication, token signature and expiry validation, and cookie-based session flows.
- **Redis & session management:** Integrating Redis for session-data retrieval and management in stateful services, while supporting stateless payment-service flows using JWT-based authentication.
- **Microservices & code reusability:** Enabling shared service modules to support stateful and stateless deployment configurations; publishing reusable JAR artifacts to JFrog Artifactory and integrating them into the payments repository through Gradle dependencies.
- **Performance engineering:** Profiling API request lifecycles across filters, token processing, controllers, and external calls; identifying redundant processing, improving session reuse, and introducing asynchronous logging to reduce request-processing overhead.
- **AWS & deployment:** Contributing to Python-based OAuth connect endpoints deployed on AWS Lambda, supporting CloudWatch-based debugging and maintenance, and participating in application deployment and production issue resolution.
- **QA automation initiative:** Independently developed a JavaScript-based Bruno automation utility to orchestrate authentication, cookie extraction, and API testing; enabled account switching through query parameters and submitted the solution to **Accenture's Automation & Innovation Challenge.**

TECHNICAL SKILLS

- **Languages**: Java | Kotlin | C++ | JavaScript | TypeScript
- **Backend**: Spring Boot |Spring WebFlux| WebClient | REST APIs | Redis | Swagger/OpenAPI | Reactive Programming, Mono | Flux
- **Cloud & DevOps**: AWS Lambda | AWS CloudWatch | Docker | GitHub Actions | CI/CD
- **Security & Authentication** : JWT | OAuth 2.0 | Authentication Filters | Cookie-based Authentication
- **Tools & Testing** : Git | Maven | Gradle | Elasticsearch | Kibana | React.js | JUnit | Mockito

PUBLICATION

IEEE Publication – Blockchain Forensics in Disaster Management (Nov 2024)

PROJECTS

AI-POWERED INCIDENT MANAGEMENT PLATFORM

Tech Stack: Spring Boot | Kafka | Redis | Elasticsearch | AWS | React | OpenAI

Project Link: GitHub – github.com/anshika0604

• Developed a cloud-native incident management platform using Spring Boot microservices and event-driven architecture.

• Integrated Generative AI capabilities for automated root cause analysis and incident reporting.

• Designed scalable backend architecture using Docker, Redis, and cloud engineering best practices.

EDUCATION

- MCA | Graphic Era Deemed to be University (2022 - 2024) | CGPA: 8.84
- B.Sc. Computer Science (Honors) | Doon University (2019 - 2022) | CGPA: 8.64

ACHIEVEMENTS

- Gold Medalist | IdeathonX 1.0 Winner | 500+ LeetCode DSA Problems Solved
